

PRODUCT AND INDUSTRIAL DESIGN

Ronen Uliel and Omer Ben-Baruch

Holon Academic Institute of Technology

2nd Year

Advisor/Instructor: Gad Freedman

Product Design Department

Holon, Israel

Yamaha YF550Z

These students created a model of relatively large mock-up of the Yamaha YF 550Z. The model they used was relatively detailed and well formed. As they had the model in front of them they could work on the finest details and they did. The model they created is an accurate replica of the original toy model including even the smallest details.

Reasons for the nomination:

The rendering was well done with lighting and material attention. The presentation was kept simple and clean not to take up any of the observer attention.

Jury Comments:

This is a very thorough project. It is a model of an existing design, so its merit is primarily in the mastery and integration of the many different modeling techniques necessary to describe all the various families of forms that design consists of. - *Marcos Novak*
