

**Honorable
Mention**

Project Title: **Dragonfly**

Student name: **Ofir Levi**

Level: **2nd Year**

Course: **ID**

Advisor/Instructor: **Gadi Freedman**

Principal Investigator: **Gadi Freedman**

Department/School: **Holon Academic Institute of Technology,
Holon, Israel**

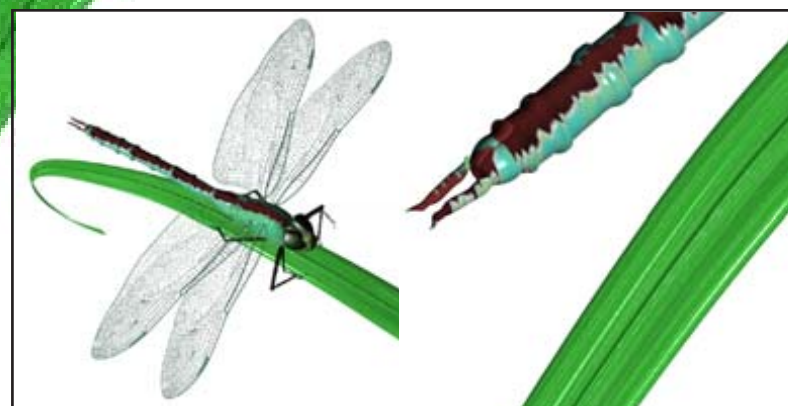

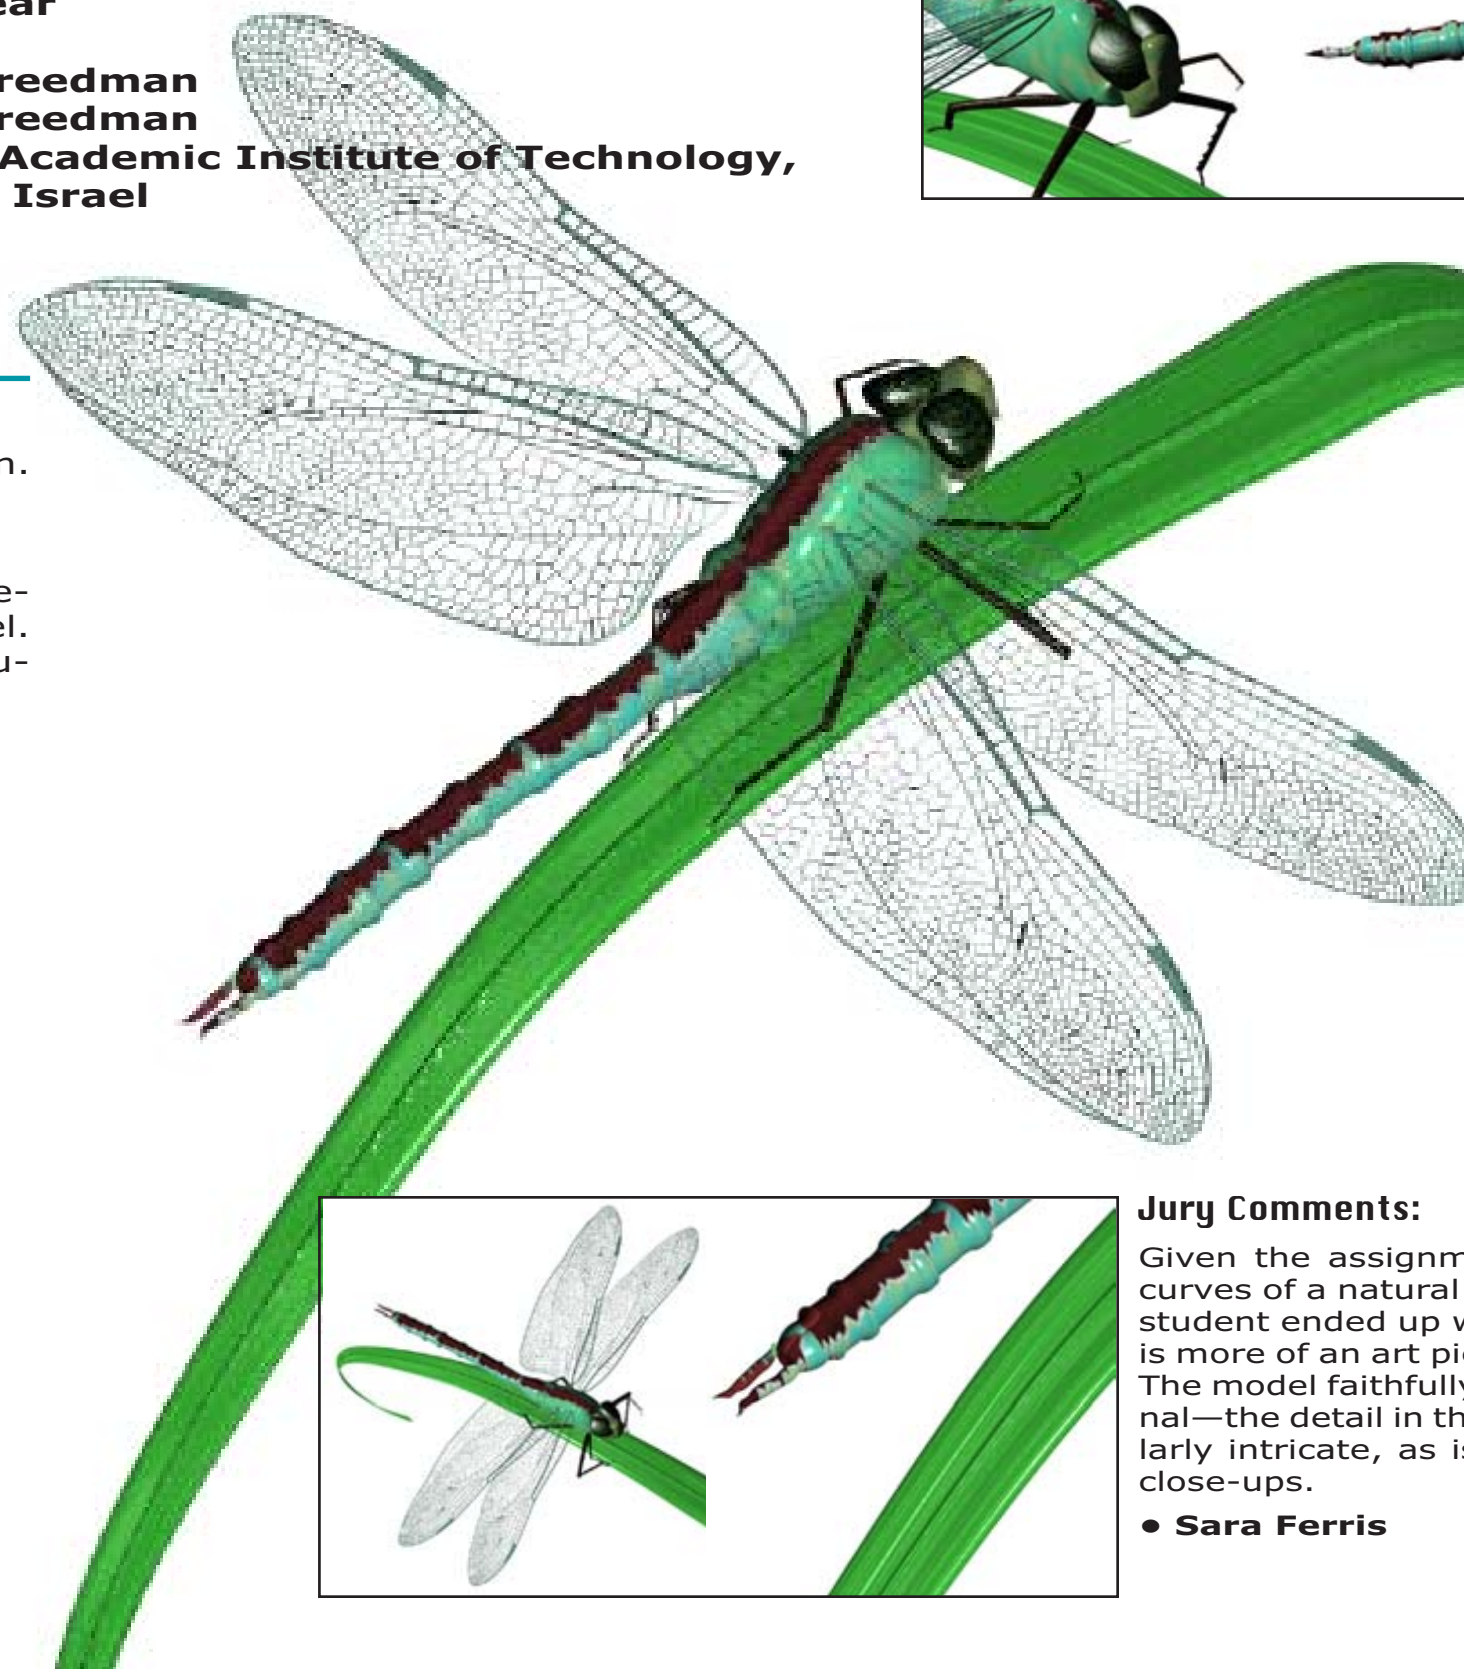

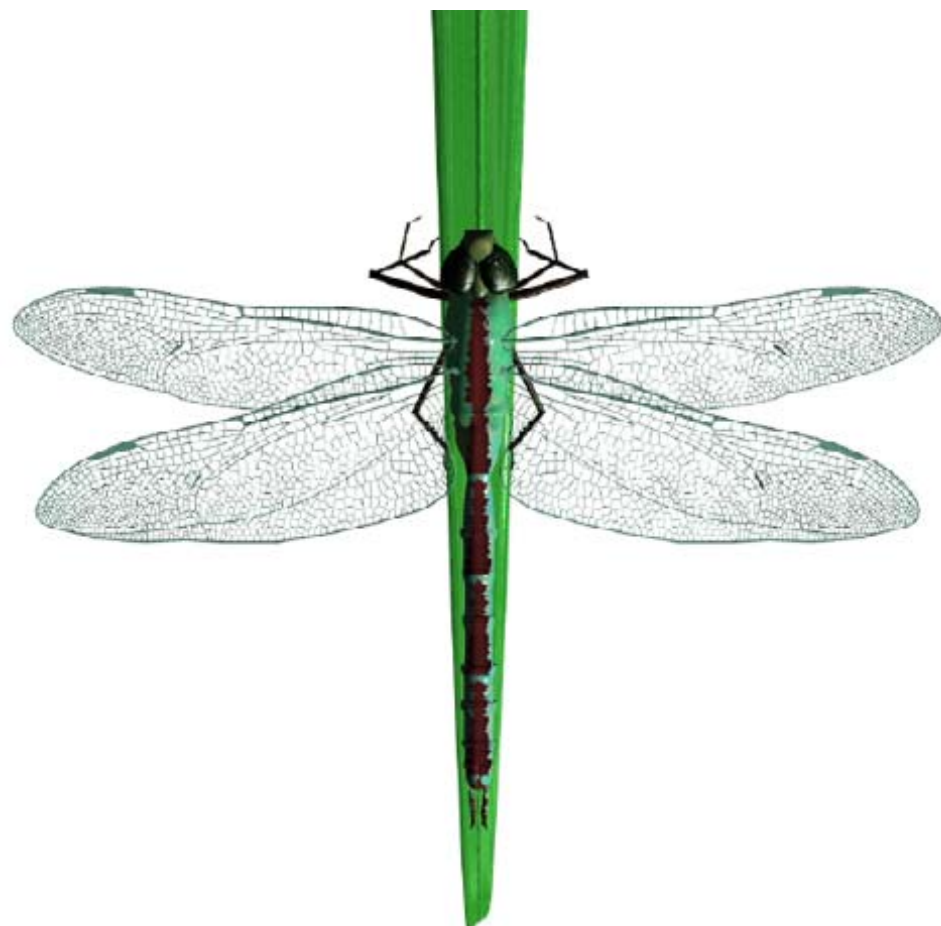

Summary description of project:

Modeling the curved surfaces of a natural organic form.

Reasons for the nomination:

Taking on himself a large scaled task, this student decided to recreate all the details at the modeling level. The result is an amazingly detail model done meticulously and presented beautifully.

Jury Comments:

Given the assignment to model the curves of a natural organic form, this student ended up with an image that is more of an art piece than a replica. The model faithfully depicts the original—the detail in the wings is particularly intricate, as is the detail in the close-ups.
